WinWay Technology Co Ltd | Asia Pacific

Asia AI Summit 2026 Feedback

Larger package size drives testing interface demand: As testing time continues to increase, the pin count per socket has increased from 4-6k to over 10k, and management expects this trend to continue in the next few years as chips become more and more complex. Incremental testing steps, such as functional burn-in or SLT, also expand the TAM for Winway.

Burn-in socket: This was not the key focus for Winway in the past, but it said it will now try to target the high-end segment instead of dealing with pricing competition in the low-end market once it expands its new capacity in the next few years.

Capacity expansion plan: Winway expects its pogo pin capacity for test sockets to reach 9mn/month by end-2026, then 14mn/month by 1H27, mainly from its Renwu Facility 1. Renwu Facility 2 is expected to start in 2Q27, further lifting capacity to 14mn/month. The current pogo-pin self-sufficiency ratio is ~35-45%; management targets 50-60% for the long term, which we expect to more than offset depreciation.

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.
