On June 16, Sieyuan announced a Rmb480mn Phase III transformer factory expansion, which we view as a clear positive for its medium-term export growth visibility and capacity ramp-up through 2028-2029E.

We estimate the project could take around one year to complete, based on the timeline of the Phase II factory, which started construction in November 2024 and began production in November 2025 (link). As such, we expect Phase III to start production in 2H27E. Based on Sieyuan's previous investment plan, we estimate this investment could add roughly 300 units of oil-immersed transformer capacity. Assuming an ASP of over Rmb10mn per unit per company comments, this implies more than Rmb3bn of annual production value, indicating the company's positive export outlook.

Together with Phase II capacity of around 400 units and Phase III capacity of around 300 units, we estimate Sieyuan's transformer capacity could support up to around Rmb9-10bn of annual production value. This provides solid capacity support for our power transformer forecasts of Rmb8.2bn by 2028E and Rmb10.6bn by 2029E, which remain unchanged.

We reiterate our Buy rating on Sieyuan, as we see the company as a key beneficiary of the global power transformer shortage. Global transformer lead times remain elevated at around 128 weeks (link), while capacity expansion typically takes 2-3 years. By contrast, Sieyuan can deliver transformers in around 6-9 months, or 24-36 weeks, and expand capacity within roughly one year, supported by China's agile supply chain. We believe this time-to-market advantage, together with overseas execution and certification progress, should help Sieyuan continue to gain share in the global transformer market.

Investment thesis, valuation methodology and risks

Investment thesis: Sieyuan is a Chinese grid equipment company, ranking among the top 1-3 in various product categories with the State Grid. With recognized exceptional product quality and operational excellence, we expect Sieyuan's export revenue to grow at a 43% CAGR in 2025-2030E driven by the global grid upgrade cycle due to aged infrastructure, economy development, renewable energy and Sieyuan's market share gain in switchgear/power transformers from 6%/1% in 2025 to 8%/6% in 2030E. In particular, Sieyuan has made breakthroughs with US data center operators due to the supply shortage in power transformers, hence we expect its US revenue to take up

26%-30% of overseas revenue over 2026E-28E, and higher profit contribution helping with firmwide margin uplift. We think there is visibility for global power transformer supply shortage at least into 2030E and global grid upgrade into at least 2040E-2050E. We like its unique positioning because we believe only a few Chinese companies can combine high quality with a long-term commitment to navigating rigorous certification processes, making sustained upfront investments, and establishing a proven track record overseas - areas where Sieyuan excels in our view.

Valuation methodology: Our 12m target price of Rmb223.9 is based on a 2028E P/E of 25x discounted back to 2027E at 10% CoE. **Key downside risks:** (1) Overseas execution risk; (2) Margin may come below our expectations; (3) Slowdown in data center construction pace.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.
