BofA SECURITIES

The Flow Show

Red, White, and Boom

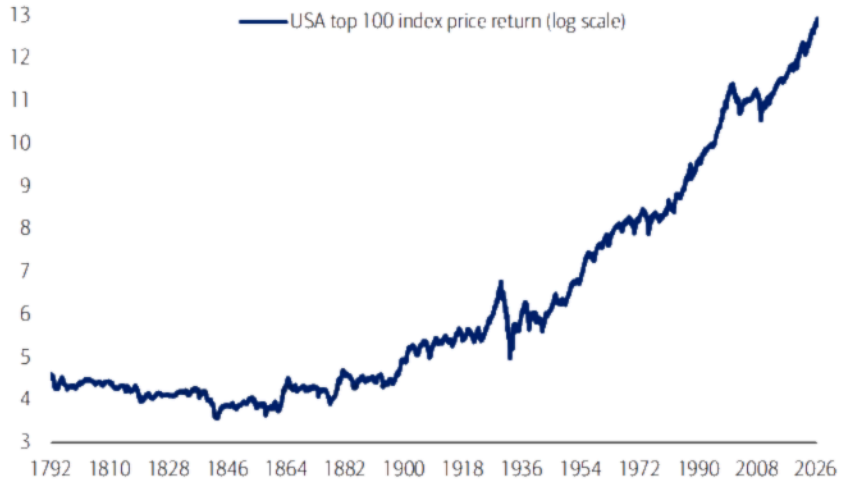

Scores on the Doors: commods 33.3%, oil 19.2%, intl stocks 12.0%, SPX 9.3%, US$ 2.6%, cash 1.9%, HY 1.8%, IG 0.2%, govt bonds -1.2%, gold -4.7%, bitcoin -30.1% YTD.

Tale of the Tape: Q2 AI/US boom leaders... SOX 88%, KOSPI 64%, biotech 24%, small cap 21%, banks 17%; Q2 war/inflation laggards... Saudi -4%, China -10%, gold -14%, bitcoin -14%, energy -15%, defense -16%, oil -31%; USTs vs. gold breaking 2020s down-trend (Chart 3 – peak inflationary de-globalization), boomy secular breakout for EM & small cap, AI arms race hyperscalers (MAGS) sideways for third straight quarter... all big stuff.

The Price is Right: since independence in 1776... US beats UK on population growth (2.0% vs. 0.8% – Table 1), nominal GDP growth (6.0% vs. 5.8% – Chart 5), real GDP growth (3.6% vs. 2.1%), and US has better inflation record (2.5% vs. 3.9% for UK); but UK has enjoyed lower cost of government debt... UK 10-year bond yield average 5.6% past 250 years vs. 5.8% in US (Chart 6); note US govt debt has grown 5.8% p.a. since 1780), and annual total return from US Treasuries since independence is 5.1%.

The Biggest Picture: red, white, and boom... past 250 years, US stocks (USA Top 100 index) have annualized 3.6% price return (Chart 2), 8.7% total return; even stronger past 150 years (S&P 500 = 4.9% price return & 9.3% total return); but in their first 50 years, US stocks annualized a 2% loss (flat in first 100 years) driven by panics of 1819 & 1837, limited growth drivers until railroads, and highly concentrated indices (First Bank of the United States = >80% of market cap of Philadelphia Stock Exchange in 1792).

Chart 2: Red, White & Boom – US stock prices since independence
USA Top 100 index since 1972 (price return, log scale)

Up to 9.5 from 9.1

Source: BofA Global Investment Strategy. The indicator identified above as the BofA Bull & Bear Indicator is intended to be an indicative metric only and may not be used for reference purposes or as a measure of performance for any financial instrument or contract, or otherwise relied upon by third parties for any other purpose, without the prior written consent of BofA Global Research. This indicator was not created to act as a benchmark.

BofA GLOBAL RESEARCH

Trading ideas and investment strategies discussed herein may give rise to significant risk and are not suitable for all investors. Investors should have experience in relevant markets and the financial resources to absorb any losses arising from applying these ideas or strategies.
BofA Securities does and seeks to do business with issuers covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.
Refer to important disclosures on page 11 to 13. **12990253**

Timestamp: 02 July 2026 09:34PM EDT

Weekly Flows: $55.0bn to cash, $29.1bn to bonds, $2.0bn from crypto, $3.0bn from gold, $13.9bn from stocks.

Flows to Know:

- Crypto: $2.0bn outflow, biggest since Nov'25,
- Gold: $3.0bn outflow, 7th week of outflows, longest streak since Mar'24,
- IG bonds: $17.2bn inflow, 13th week of inflows,
- HY bonds: $3.4bn inflow, biggest since May'25,
- US equities: $17.2bn outflow, biggest since Mar'26,
- Japan equities: $1.9bn inflow, biggest in 7 weeks,
- Financials: $2.2bn inflow, biggest since Jan'26,
- Telcos: $2.4bn inflow, biggest since Aug'25,
- Tech: $14.3bn inflow, on track for record $152bn inflow YTD,
- Energy: $3.2bn outflow, biggest since Jul'24,
- Materials: $6.8bn outflow, biggest since Mar'26.

BofA Private Clients: $4.5tn AUM... 65.4% stocks, 17.6% bonds, 9.8% cash; biggest outflow to equities in four weeks; private clients extending duration in USTs... fifth week of outflow from T-bills, inflows to T-notes; private client equity ETF share count up 5.4% YTD, 0.6% MTD, 0.1% past week; in ETFs past four weeks, private clients buying materials, healthcare, munis, and selling Japan, staples, financials.

BofA Bull & Bear Indicator[1]: rises to 9.5 from 9.1 driven by more bullish hedge fund positioning (reducing S&P 500 futures shorts and reducing VIX futures longs), bond inflow to HY bonds, equity inflows to tech and healthcare; BofA Bull and Bear Indicator "sell signal" triggered May 20th; since 2002 there have been 17 "sell signals", average loss for global stocks over 2-3 months is 2-3%, hit ratio of ~60%, max drawdowns of 15-20% (see BofA Bull & Bear Indicator revamp report).

[1] "Old" BofA Bull & Bear Indicator at 5.7; for more info see BofA Bull & Bear Indicator revamp.

BofA GLOBAL RESEARCH

Disclaimer: The indicators identified above as the BofA Bull & Bear Indicator, MVP Model, BofA Global Breadth Rule, BofA EM Flow Trading Rule, BofA Global Flow Trading Rule, BofA Global FMS Macro Indicator, BofA Global FMS Cash Rule, Global Wave, Sell-Side Indicator, and Global Financial Stress Indicator are intended to be indicative metrics only and may not be used for reference purposes or as a measure of performance for any financial instrument or contract, or otherwise relied upon by third parties for any other purpose, without the prior written consent of BofA Global Research. These indicators were not created to act as a benchmark.
The analysis of the BofA Bull & Bear Indicator in this report is back-tested and does not represent the actual performance of any account or fund. Back-tested performance depicts the hypothetical back-tested performance of a particular strategy over the time period indicated. In future periods, market and economic conditions will differ and the same strategy will not necessarily produce the same results. No representation is being made that any actual portfolio is likely to have achieved returns similar to those shown herein. In fact, there are frequently sharp differences between back-tested returns and the actual results realized in the actual management of a portfolio. Back-tested performance results are created by applying an investment strategy or methodology to historical data and attempts to give an indication as to how a strategy might have performed during a certain period in the past if the product had been in existence during such time. Back-tested results have inherent limitations including the fact that they are calculated with the full benefit of hindsight, which allows the security selection methodology to be adjusted to maximize the returns. Further, the results shown do not reflect actual trading or the impact that material economic and market factors might have had on a portfolio manager's decision-making under actual circumstances. Back-tested returns do not reflect advisory fees, trading costs, or other fees or expenses.
