Top 100 developers' contract sales declined by 12% YoY

Top 100 developers' contract sales declined 12% YoY in June 2026, widening from -2% in May 2026 (Figure 1). On MoM basis, June 2026 sales improved 5% from May, vs 2021-2025 average of 26%. In the first half of this year, top 100 contract sales declined by 16% YoY, vs -17% in 5M2026. Despite a softer momentum in property sales in June 2026, land market remained heated in June. In June, Shenzhen sold three land parcels for a total consideration of Rmb20bn, at 99-151% premium above base price (see note). In Shanghai, on 30 June 2026, C&D International acquired a land parcel for Rmb7bn, at 30% premium, and Greentown China won two parcels for a total of Rmb3bn, at c.20%premium. The strong land premiums show developers' confidence in tier 1 cities' prime location, which reflects the recent strong sell-through rate in tier 1 cities' high end property. This is in line with our expectation of improved sentiment in physical market (see our upgrade note).

Secondary transactions remained strong in June 2026

As of the week of June 28th, secondary transaction volume (in units) for 12 cities remained strong at +11% YoY month-to-date. In addition, as of 24 June 2026, growth of secondary listings across 50 cities slowed to 2.3% YoY, while tier 1 cities' secondary listings decreased at -9.7% YoY, a positive signal suggesting less secondary supply. We attribute the accelerated decline of secondary listings in tier 1 cities to policy relaxation, improved housing sentiment and rental yield improvement. Meanwhile, rental price in four tier 1 cities still declined by 2.0% YoY in May 2026, narrowing from -2.7% in April 2026 (Figure 11).

COLI monthly contract sales moved to the first place

In June 2026, SOE developers continued to gain market share from POE developers, and SOE developers' contract sales outperformed at -8% YoY (Figure 7). As of 1H26, among developers under our coverage, COLI, CMSK, Jinmao and CRL outperformed with contract sales growth of +12%/8%/8%/6% YoY respectively, while Vanke/Longfor underperformed with contract sales declining by 49%/53% YoY. COLI' monthly contract sales moved to the first place at Rmb31.4bn, +5% YoY, due to two new launches in Shenzhen - Antiyayuan (100% sell-through) and Yunsongjiuzhang (83% sell-through, see our field trip video). Our top pick remains **COLI**, and we are Buy rated on **CMSK, Jinmao and CRL**.

Valuation Method and Risk Statement

We base our valuations of China's property developers on PE or P/BV multiples. We believe key downside risks related to the Chinese property market include: 1) government administrative policies that restrict demand and mortgage lending; 2) tight financing for China's developers; 3) lower-than-expected residential growth in China's economy. We believe key upside risks include: 1) material policy loosening that effectively boosts residential property sales, investments and prices to positive YoY growth; 2) large-scale asset disposals at fair prices by some developers to ease liquidity pressures.

COLI: Our price target of COLI is based on P/BV. Key risks related to COLI are: 1) government administrative policies to restrict demand and mortgage lending; 2) tight financing for China developers; and 3) lower-than-expected growth of China's economy. Key upside risks: 1) rise in sales volume and prices on property policy loosening; 2) large-scale policy stimulus on property market.

CMSK: We value China Merchants Shekou using a P/BV multiple. Key downside risks to the company include: 1) lower-than-expected sales at the Qianhai project; and 2) weaker-than-expected property sales in tier 1 and 2 cities. Key upside risks: 1) rise in sales volume and prices on property policy loosening; 2) large-scale policy stimulus on property market.

Jinmao: Our price target of Jinmao is based on PE. We believe the key downside risks for Jinmao include: 1) a tightening of property policies resulting in restrictions on the primary market and pre-sales, and squeezed margins; 2) an unsuccessful roll-out of city operation business; and 3) lower-than-expected growth of China's economy. Key upside risks: 1) rise in sales volume and prices on property policy loosening; 2) large-scale policy stimulus on property market.

CRL: Our price target of CRL is based on PE. We believe the key risks to CR Land include: 1) a slowdown in China's property market; 2) increasing competition in land market leading to higher land costs and lower margins; and 3) lower-than-expected growth of China's retail sales market. Key upside risks: 1) rise in sales volume and prices on property policy loosening; 2) large-scale policy stimulus on property market; 3) accelerated spin-off of its investment properties at higher-than-expected valuation.
