Goldman Sachs & Co. LLC

While we see upside to estimates across IT hardware vendors from higher ASPs and improving AI-related infrastructure demand from enterprise, we think the strong outperformance for the sector in 2Q (+111% v. SPX +13%) makes for a challenging risk/reward set up into earnings. Across enterprises, we expect on-premise agentic AI adoption & on going data center modernization efforts will drive continued strong demand for data center hardware (servers, storage, networking), though supply constraints should limit significant shipment growth in the near term (but provide visibility for 2H26 and 2027 revenue through stronger backlogs). As such, we expect much of the growth in C2Q26 for data center hardware will be driven by pricing vs. unit growth, especially as enterprises have shown a higher willingness to accept elevated prices than previously expected. For PCs, we continue to expect double-digit % declines in unit shipments in C2H26, though these volume declines should be more than offset by higher pricing. Key themes we are watching this earnings season include (*see inside for more details*):

- **How much could agentic AI up lift the traditional compute market?** We expect agentic AI to drive significant upside in the traditional server market as enterprises refresh aging infrastructure and deploy CPU-heavy, on-premises solutions for deterministic workflows. *Positive read through for DELL & HPE.*
- **Is demand for AI servers broadening out from hyperscalers and neoclouds to sovereigns and enterprise?** While enterprise and sovereign investment still lags neoclouds, we are encouraged by recent news flow around new projects/use cases for AI servers across customer types, like on-premises code generation and proprietary AI tools. *Positive read through for DELL (AI server leader across neoclouds, enterprises) & HPE (AI servers for enterprise/sovereign, high-performance networking for AI servers).*
- **What is the role of storage appliances and data platforms in AI training and inference?** We expect the rise of agentic AI will create incremental demand for unified, high-performance enterprise storage platforms to break down data silos and efficiently feed complex AI workflows. *Positive read through for DELL, NTAP, and to a lesser extent HPE.*
- **How are PC vendors navigating supply constraints?** In order to navigate lower industry volumes and higher input costs, PC vendors are raising prices (+19%

Goldman Sachs does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. For Reg AC certification and other important disclosures, see the Disclosure Appendix, or go to www.gs.com/research/hedge.html. Analysts employed by non-US affiliates are not registered/qualified as research analysts with FINRA in the U.S.

year-over-year in C2Q, per IDC) and re-orienting their portfolios towards higher margin categories like premium consumer (AI PCs), commercial, and peripherals. We do not expect incremental memory supply from Chinese vendors like CXMT coming to market to have a material impact on US OEM PC shipments or pricing trends in C2H26. *Mixed read through for DELL (more commercial exposure, larger supply chain/procurement) & HPQ (more consumer exposed).*

- **Will US hardware OEMs benefit from tariff refunds?** US hardware OEMs, particularly HPQ, could experience a notable earnings uplift in late 2026 from federal IEEPA tariff refunds that are not currently factored into company guidance. *Positive for HPQ (printing segment).*

We reiterate our Buy ratings on data center infrastructure exposed names DELL, HPE, and NTAP while remaining Sell rated on PC/printer OEM HPQ.

How much could agentic AI up lift the traditional compute market?

Background: Last quarter, US server vendors & chip makers posted massive beats (DELL reported traditional server growth of +92% year-over-year v. consensus expectations for teens % growth) for traditional servers and raised outlook significantly for the full year, driven by both higher pricing and stronger unit demand from both (1) the refresh of existing enterprise infrastructure and (2) net-new agentic AI demand. Industry outlook for the traditional server market was also raised significantly, with 650 Group now expecting the market to nearly double by the end of the decade to $164 bn (up 55% from previous outlook for 2030). Heading into C2Q earnings, investors are looking to understand how much further upside there could be to traditional servers revenue (both from ASP and unit demand perspective) across DELL, HPE, and SMCI, especially when contemplating the ongoing constraints on key components including DRAM and NAND.

Why are CPUs better for agentic AI? Agentic AI requires a hybrid approach that blends the probabilistic reasoning of GPUs (statistical pattern recognition and generating tokens) with the deterministic execution of CPUs (rule-based logic, API tool calls, and strict workflow orchestration). Because agentic workflows are heavily tool-dominated and require constant, predictable orchestration, CPUs are better suited to handle these deterministic tasks to prevent latency bottlenecks. In June, we hosted former Intel executive Jordan Plawner for deep dive on CPU server trends. In addition to their strength at sequential processing, Mr. Plawner also noted that CPUs have direct access to DRAM, which makes them more efficient as feeding more data into AI systems. He sees agentic AI as driving a 5-6x uplift to the CPU server market as the market evolved from training towards inference/agentic workloads, with CPU:GPU ratios moving from 1:4 towards 1:1 over time.

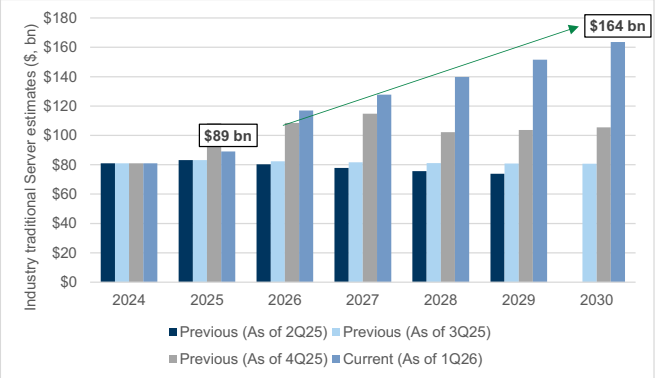

Why will enterprises need to invest in on-premise infrastructure (v. cloud) for agentic AI? In July, we hosted former Microsoft director William Fong for a deep dive on AI infrastructure trends, where he highlighted his expectations for agentic AI to drive workloads on premise because of better cost, latency, and governance. To optimize across these constraints, Mr. Fong has observed organizations deploying a hybrid compute strategy where they are increasingly running individual AI agents locally on-premise to achieve millisecond-level latency and maintain strict data privacy, while utilizing the cloud for the complex multi-agent orchestration layers.

What about refreshing the existing installed base of traditional servers? In addition to the agentic AI tailwind, the enterprise server market should also benefit from the refresh of its sizable aged installed base. In our Traditional and accelerated server industry primer published June 22, 2026, we highlighted the benefits of refreshing to new systems to increase the efficiency and power consumption. Latest generation CPU servers offer significant performance and efficiency improvements as compared to the vast majority of the installed base, driven by a ~4x higher core counts and ~2x denser memory/core. For cloud service providers, this densification is important because it addresses issues around power constraints, which is one of the limiting factors of overall compute growth. For enterprise, refreshing installed servers is also prerequisite for running agentic workflows, especially because running agents 24/7 will further accelerate the mean time to failure for servers, which is very costly for enterprises.

Where are enterprises finding incremental room in IT budgets? In our June 2026 survey of CIO spending intentions, we found that IT hardware spend expectations have increased significantly since our November 2025 survey as customers digest higher ASPs driven by DRAM/NAND supply tightness against a backdrop of continued refresh/modernization demand. (1) 60% of respondents now expect to increase server spending (v. 37% prior); (2) 75% of respondents now expect to increase storage spending (v. 47% prior); and (3) 69% of respondents now expect to increase server spending (v. 36% prior). At the same time, (4) Networking spending expectations worsened sequentially. In the same survey, expectations for spending on software & IT services weakened relative to the November 2025 survey, suggesting that CIOs are re-allocating budget to prioritize hardware.

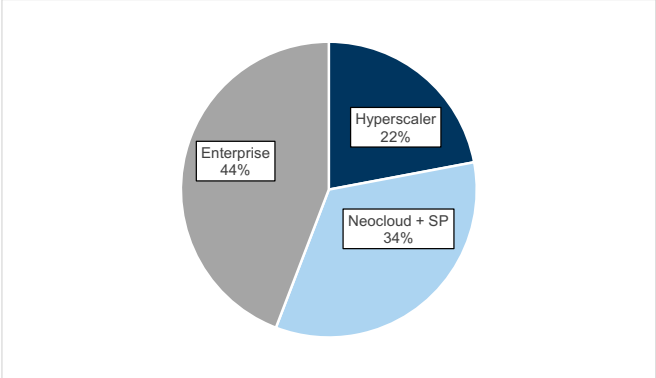

Open questions we have about traditional server demand: (1) How much of the raised outlook for CPU server demand is driven by units v. ASPs? (2) What limitations are there on industry shipments volumes because of component shortages? (3) How might scale benefit allocation of supplies, and will that impact market share dynamics? (4) Do enterprises want "best in breed" or do they want a bundled solution? (5) How sustainable is demand from on-premise infrastructure if cloud compute rental prices come down?

Exhibit 1: Traditional server forecasts for 2026-2030 were revised upwards by ~31% on average this quarter; 650 Group now expects the traditional server market to nearly double by the end of the decade to $164 bn

Is demand for AI servers broadening out from hyperscalers and neoclouds to sovereigns and enterprise?

Background: AI infrastructure demand elevated across hyperscalers & neoclouds. Our data center & utilities analysts updated the GS global data center capacity forecasts in July using the latest data from 451 Research's database and now forecast 217GW of global data center supply by 2030 (v. 168GW prior from our last update in February 2026), representing 116GW of additional capacity from 101GW in 2025 (restated higher from 74GW prior). This addition of 116GW would represent $6 tn of capex, assuming a $50B/GW rule-of-thumb while acknowledging that IT infrastructure costs continue to see upward pressure. GS analysts' see this capex well-covered by current consensus expectations for hyperscale capex (~$1 tn/year on average), which does not include SpaceX AI capex, private company capex, or datacenter platform capex. Further, GS analysts become more positive on the neocloud segment following several large data center lease announcements in the last 3 months including by TeraWulf (Anthropic), Hut8 (undisclosed IG tenant), and others.

Are AI infrastructure projects getting delayed? Former Microsoft executive William Fong clarified that recent reports of Microsoft canceling data center MOUs with former bitcoin-mining neoclouds did not signal softening demand for AI training. Instead, these cancellations were driven strictly by the sites' inability to secure guaranteed power grids and meet the intense energy requirements of modern AI clusters.

Are clouds overbuilding? Former Microsoft executive William Fong does not see AI infrastructure at risk of being overbuilt, largely due to the massive demand tailwinds from agentic AI. While inference is shifting toward a hybrid model across the cloud, on-premises, and the edge, there remains a robust demand for net-new AI training infrastructure, especially since the vast majority of the world's data (of which the internet represents only ~1/3) resides untrained within enterprise systems.

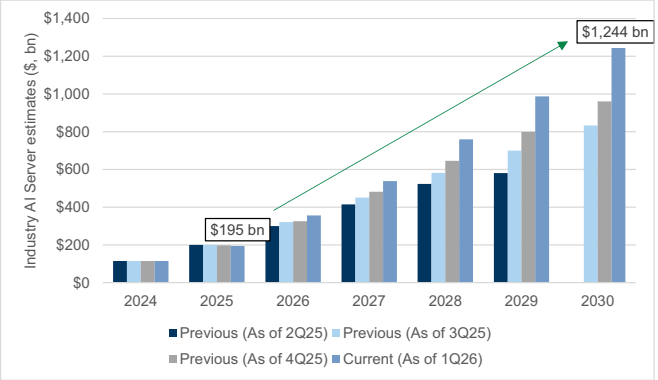

How might GPU backstop programs support continued neocloud demand? Chipmakers like NVDA are providing its neocloud customers with a minimum revenue

guarantee on underlying GPU capacity (in the event that the neocloud is unable to lease out its capacity to other customers) in exchange for a share of the neocloud's revenue above a certain level. These backstop programs should broaden out compute availability to end customers by reducing the cost of capital for neoclouds for shorter-term leases and smaller deals. NVDA highlighted sovereign neoclouds Firmus and Sharon AI as two early partners in its revenue-sharing and credit-support model. We view continued robust neocloud demand as positive for leading AI server vendors DELL and SMCI.

Are enterprises & sovereigns buying more AI servers? While enterprise and sovereign investment still lags neoclouds, we are encouraged by recent news flow around new projects & use cases. In our monthly AI project Pulse, we track broadening investments in sovereign AI infrastructure in the last quarter, including: Argentum AI in Poland (June 2026), Odine in Turkey (June 2026), Yotta Sovereign Cloud in India (June 2026), Naver Cloud in Saudi Arabia (April 2026), and Bell in Canada (April 2026). We are also encouraged by new use cases and increasing adoption by enterprise buyers of AI servers, such as Penguin's Tier 1 US financial customer who is building out an on premise AI data center focused on inference and agentic AI for code generation using open weight LLMs. PENG flagged AI-assisted code generation in particular as a common use case for inference-focused on-premise AI factories, where the right architecture can deliver superior token economics. Other enterprise adoption examples that illustrate broader on-prem/hybrid investments in AI infrastructure include Starbucks, which is reported to be developing proprietary AI-assisted in-house tools for inventory tracking and maintenance management, with the intent to replace third-party software from Microsoft, IBM, and Oracle. Bloomberg reported that Starbucks' enterprise technology team is on track to reduce its budget by ~$30 mn including ~$10 mn in software spending. Expanding enterprise AI adoption should benefit enterprise-oriented hardware OEMs (DELL, HPE) and IT distributors (SNX, INGM).

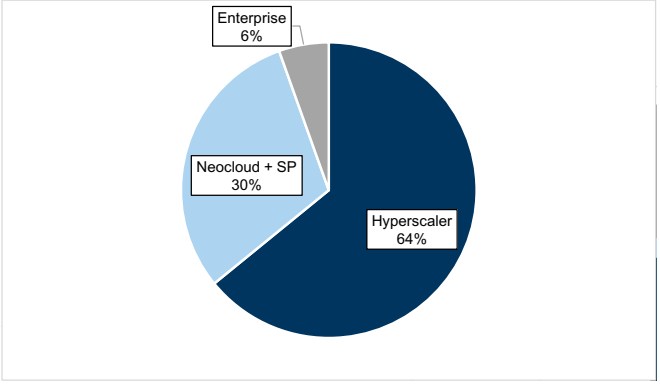

Open questions on AI server market: (1) How will increasing silicon diversity impact the US hardware OEMs?; (2) How sustainable is demand for AI servers from the largest neoclouds at branded OEMs, or will they increasingly move to ODM-like procurement models?; (3) How might the Vera Rubin platform launch impact demand for older AI servers that OEMs may have in inventory/on balance sheet?; (4) What other bottlenecks exist in the AI server supply chain that may limit vendors' ability to ship to underlying demand?

Exhibit 5: AI server forecasts for 2026-2030 were revised upwards by ~19% on average this quarter; 650 Group now expects the AI server market to 6x by the end of the decade to $1.2 tr

What is the role of storage appliances and data platforms in AI training and inference?

Background: Following elevated expectations for traditional servers (in addition to accelerated compute & data center networking), investors are looking to understand which other enterprise infrastructure hardware categories could also benefit from agentic AI, such as enterprise storage. Enterprise storage has not seen the same TAM expansion to date as compute and networking; 650 Group forecasts the external storage market to grow at a +6% 5-yr CAGR from 2025-30, v. +13% for CPU servers, +45% for AI servers, and +31% for data center switching.

Does agentic AI drive a need for incremental enterprise storage capacity? In July, we hosted NTAP's Chief Product Officer Syam Nair for a deep-dive on AI's impact on the storage market. While agentic adoption at the enterprise is still in the early phases, NTAP management believes that the transition from basic generative AI to autonomous, multi-step AI agents could drive significant new capacity growth for inferencing. As

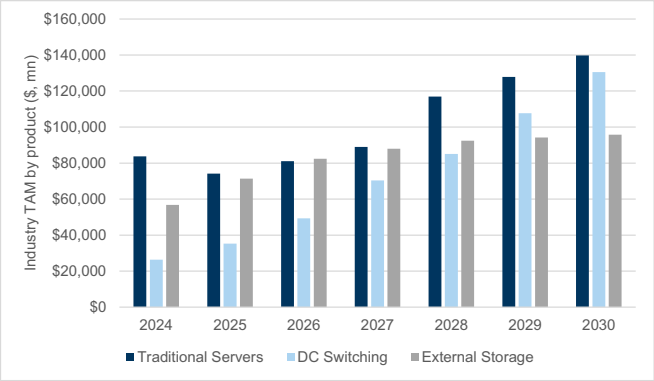

management highlighted, AI agents must reason across complex workflows using real enterprise data, which today remains highly siloed, duplicated, and fragmented across different formats (block, file, object) and environments (on-premises and cloud). To prevent these silos from stalling AI initiatives, enterprises require a uniform, disaggregated data platform that provides a single source of truth with built-in governance and security. NetApp addresses this critical bottleneck through its differentiated ONTAP platform (unified management layer across hybrid multicloud environments) and the newly launched AI Data Engine (AIDE). Co-engineered with NVIDIA, AIDE is a secure, unified AI data platform stack that acts as the context memory layer for agentic AI. It automatically creates and continuously updates a global metadata catalog, enabling in-place semantic search, real-time change synchronization, and policy-driven guardrails without requiring excessive data copying.

How do legacy storage vendors address neocloud storage/data platform needs? To maximize performance in AI training and inference workloads, neoclouds typically leverage parallel file systems from companies like WEKA (GPUaaS partnership with Nebius) or VAST ($1+ bn commercial partnership with Coreweave). In training, these parallel file systems ensure that data can be quickly accessed by GPUs without bottlenecks. In inference, high performance storage is needed to make sure that models can be loaded rapidly. While traditional enterprise storage solution providers have not meaningfully participated in neocloud storage needs yet, we are encouraged by the investments being made to expand their portfolios to address the need for more high-performance, disaggregated storage. Specifically, Dell's new parallel file system is Project Lightning, while NTAP's recently introduced AFX platform to disaggregated storage architectures. While it's still early days since these platforms have been introduced, we view the neocloud storage TAM opportunity as incremental to DELL, HPE, and NTAP's current enterprise-focused exposure.

How are vendors navigating higher NAND costs? Gartner is projecting a 200%+ YoY increase in NAND flash prices in 2026 due to unprecedented AI demand. We expect DELL & NTAP should be well-positioned to navigate this volatile pricing environment because of the diversity of its storage portfolio, which spans premium performance flash, high-density capacity flash, and hybrid flash/HDD arrays. Through these expansive portfolios, vendors are able to provide a tiered offering to its customers, moving cold or infrequently accessed data to lower-cost capacity tiers or cloud storage. We are also positive on as-a-service consumption models at NTAP (Keystone) and HPE (Greenlake) as alternate ways to help end customers defray costs as they pay only for what they consume and avoid pre-purchasing expensive flash during peak pricing cycles.

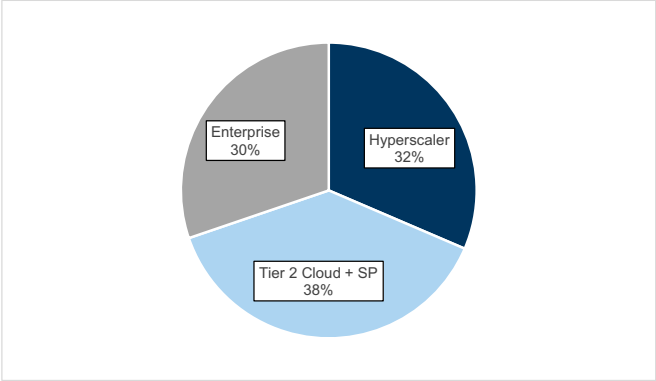

Open questions we have on enterprise storage: (1) How much of a margin uplift could DELL & HPE see from their efforts to mix shift their storage portfolios towards 1P platforms? How much higher margin are 1P platforms v. 3P? (2) How much upside is there to industry storage estimates in the medium term if agentic AI is more broadly adopted? (3) Have vendors signed LTA's with NAND/HDD suppliers to secure supply, and if so, at what price? (4) How might incremental industry memory capacity coming on-line from global vendors like YMTX change the supply environment?

Exhibit 9: Growth in the external storage TAM (+6% 5-yr CAGR) has lagged behind servers (+13%) and data center networking (+31%)

How are PC vendors navigating supply constraints?

Background: Industry PC shipments remain under pressure driven by ongoing component shortages (memory, storage), as well as a challenging macro backdrop. IDC estimates that 2Q26 PC shipments (excluding workstations) of 67.0 mn were down -4% year-over-year, marking the first decline after 9 sequential quarters of positive growth. In order to navigate lower volumes and higher input costs, PC vendors are raising prices and re-orienting their portfolios towards higher margin categories like premium consumer (AI PCs), commercial, and peripherals. PC ASPs reached $1,049 in the quarter, the highest average selling price in 24 years, up +19% year-over-year.

- **Consumer PC** revenue grew +12% yoy in 2Q26 on -5% unit declines (30.2 mn) and +18% ASP growth ($1,105). Unit growth was driven by premium PCs (ASPs >$800)

up +7%, with mainstream PC unit shipments -18% yoy in the quarter. Excluding Apple, which launched the entry level MacBook Neo in March 2026, mainstream consumer PC unit shipments would have been -27% yoy in the quarter (IDC estimates that Apple shipped 1.7 mn mainstream consumer PCs in the quarter, up from ~165k units in the year ago period).

- **Commercial PC** revenue grew +17% yoy in 2Q26 on -2% unit declines (36.9 mn) and +20% ASP growth ($1,003). Growth was driven by the government vertical +31% (units +15%, ASPs +14%), enterprise was up +17% (units -1%, ASPs +18%), and education was +5% (units -15%, ASPs +24%).

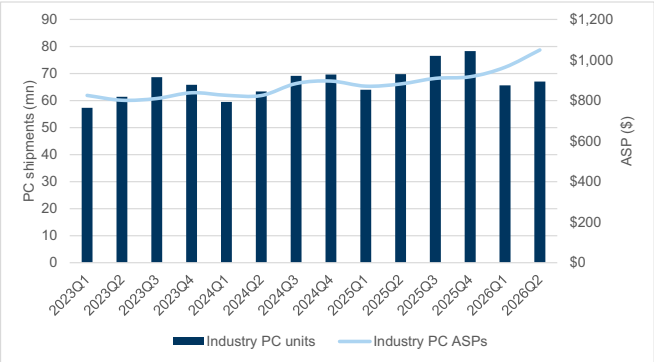

What can vendors do to offset higher DRAM costs while still protecting margins? In July, we hosted HPQ IR Alok Juyalor a group meeting where he highlighted the company'sour-pronged strategy to mitigate the impacts of commodity cost inflation on PC margins, including (1) securing component supply; (2) improving operating processes through demand-shaping activities, leveraging its Workforce Experience Platform; (3) broad-based cost take-out initiatives, such as consolidating custom SKUs and utilizing more readily available mobile parts; and (4) Pricing actions. Additionally, both DELL and HPQ have called out strategies to increase attach ratesor higher margin peripherals and software.

How much pricing can PC vendors pass through until demand starts to deteriorate? Last quarter, HPQ ASPs were up 22% year-over-year (commercial +23%, consumer +20%) but the company lost market share with units -7% year-over-year (v. industry +3%), which may indicate that customers demandor PCs erodes when price increases exceed a certain threshold. That said, given that industry PC shipments are more likely to be limited by the availability of components rather than customer demand, we expect vendors will continue to raised pricing (GSe: +20% year-over-yearor HPQ) on PCs in order to maximize profitability.

Will agentic AI support increased adoption of AI PCs? The emergence of localized agentic AI and edge computing use cases (where customers are solvingor costs, latency, security, and/or privacy) could structurally benefit HPQ and DELL's product mix. AI PCs are revenue and margin accretive, with gross margins that are aew hundred basis points higher than non-AI PCs, per HPQ. That said, given the current component supply constraints, we expect PC vendors to prioritize unit shipments to the broadest possible customer base. This may result in less memory being allocated to the first wave of AI PCs, which require a minimum of 16GB of DRAM, compared to the 8GB oftenound in standard PCs (i.e., can ship twice as many standard PCs as AI PCs under same memory allocation).

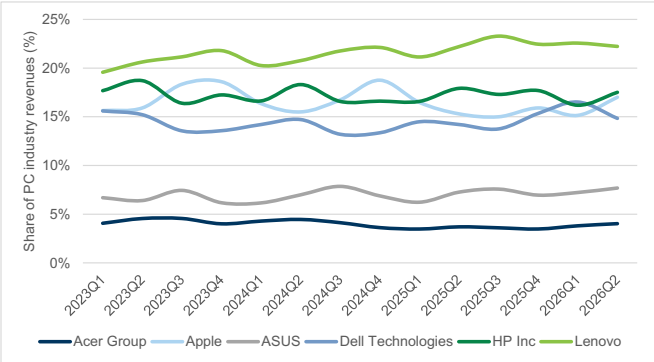

Open questions we have about the PC market: (1) Have vendors signed LTA's with NAND/HDD suppliers to secure supply, and if so, at what price? (2) How might incremental industry memory capacity coming on-line from global vendors like YMTC change the supply environment? (3) How will vendors differentiate their peripherals offering in the highly fragmented market?

Will US hardware OEMs benefit from tariff refunds?

Background: On April 20, US Customs and Border Protection (CBP) launched an online portal (called Consolidated Administration and Processing of Entries, or CAPE) for companies to request refunds from the federal government IEEPA tariffs, which were invalidated in February 2026. The tariff refund process will be rolled out across several phases, with Phase 2 launching on June 29, 2026. Multinational companies that are importers of record and have paid IEEPA tariffs can seek refunds, with refunds going directly to the importer of record (not the underlying consumer). The CBP has provided guidance that valid IEEPA refunds will generally be issued within 60 - 90 days following acceptance of the CAPE Declaration.

Are tariff refunds contemplated in current outlook? No. Across all four hardware stocks, guidance for C2Q26 (three months ending July 31, 2026) and C2026 guidance did not contemplate tariff refunds. Assuming that each vendor applied & received approval for refunds within the first month post the launch of Phase 2 (which we understand as encompassing the tariff situations of complex multi-national hardware companies), vendors should expect refund to be issues by October 2026 (C3Q26 for hardware vendors represents three months ending October 31, 2026).

How could tariff refunds impact EPS? We expect tariff refunds to have the biggest impact on HPQ, which paid ~$500 mn in tariffs and tariff-related expenses in F2025 largely related to its Print business, per the company. As a reminder, semiconductors and select consumer electronics, which encompasses the vast majority of products sold by DELL, HPE, and NTAP (and HPQ PCs), were exempt from incremental tariffs during the ongoing section 232 investigation.

While EPS impact will be ultimately be determined by the size of refund, accounting treatments, and timing of CBP processing, we estimate that HPQ could see up to a $0.46 uplift (+15% v. midpoint of guidance) to its full-year EPS outlook if 100% of its tariff and tariff-related expenses were re-couped. That said, the CBP is only refunding tariffs paid, and vendors are not likely to receive any recompensation for expenses related to the re-working of supply chains as a result of tariffs. *See analysis below for more details.*

Open questions we have about tariffs: (1) How big are vendor-specific refunds & when will they be received? (2) How are refunds being accounted for by each vendor? (3) What will vendors use the tariff refund proceeds for? (e.g., working capital? shareholder returns/dividends?).

Exhibit 21: We estimate that HPQ could see up to a $0.46 uplift to its full-year EPS outlook if 100% of its tariff and tariff related expenses were re-couped

DELL (Buy)

Setup into the print: DELL outperformed our GS hardware coverage in C2Q26 (4/1/26-8/7/26) (+168% as of 8/7/26 v. IT hardware coverage +136% and S&P500 +18%), which we attribute to DELL's exposure of AI infrastructure build outs through its market-share leading portfolio of traditional and accelerated compute solutions. While the outperformance creates a more challenging trading setup ahead of earnings, bulls continue to see fundamental upside to industry CPU and GPU server outlook, with opportunities for DELL in particular to gain share in key customer verticals. This stronger CPU server demand, as well for the potential for raised Storage outlook on broader data center modernization/refresh trends, should be a positive for DELL's ISG segment margin. Investors who are more bearish on DELL see risk to/more limited upside to full year guidance (particularly in C2H26) from rising commodity costs and constraints within the broader supply chain, as well as full valuation (DELL currently trades at 22x

consensus NTM P/E v. historical average of 10x).

Our view on key metrics and our estimates: We expect F2Q27 revenue of $44.8 bn (v. FactSet consensus $44.8 bn and guidance $44-$45 bn), with +75% year-over-year growth in ISG and +20% year-over-year growth in CSG. While we expect that unit shipments for both traditional servers and AI servers may be limited by the availability of supply & product generation transitions, we expect underlying order trends to be strong (i.e., backlog is building) and higher pricing to drive revenue growth & strong margins. Relative to peers, we expect DELL's scale, supply chain expertise and ability to quickly pass through pricing should minimize the risk of incremental margin rate headwinds related to ongoing component shortages (e.g., NAND, DRAM, CPU). In CSG, we expect units to be down MSD% year-over-year (in line with IDC preliminary C2Q unit shipment estimate), more than offset by +24% year-over-year growth in ASPs. We expect PC units shipments in F2H27 to be down high-teens %, though pricing should be up 30%+. Our non-GAAP EBIT margin outlook of 9.7% in F2Q27 is above consensus of 9.1% on better ISG mix (i.e., more traditional servers & storage), while our F2Q27 EPS estimate of $4.96 above the high end of guidance ($4.70-$4.90) and modestly above consensus of $4.70.

Estimate and Target Price Changes

We increase our F2027/2028/2029 non-GAAP EPS estimate by 4% on average on higher traditional server revenue expectations.

We are **Buy** rated on DELL with a 12-month target price of $510 (v. $500 prior) reflecting 22X (unchanged) our NTM+1Y EPS.

Key risks: (-) Weaker-than-expected consumer and commercial PC market demand; (-) Worse-than-expected enterprise IT spending; (-) headwinds from hybrid work could result in reduced spending in enterprise IT; (-) Macroeconomic weakness could result in lowered consumer demand; (-) Pricing pressure could occur as competitors discount due to excess channel inventory and reduced demand, particularly in PCs; (-) Margin pressure from higher input costs; (-) Competition from white box manufacturers could occur, particularly in servers and storage; (-) Structurally lower AI server demand from neocloud cohort.

HPE (Buy)

Setup into the print: HPE's market outperformance in C2Q26 (+122% from 4/1/26-8/7/26 v. S&P500 +18%) was driven by the company's exposure to (1) AI build outs at hyperscalers (through HPE's high performance networking portfolio) and (2) accelerating demand for general purpose/CPU compute in support of agentic AI adoption at enterprises. Like with DELL, we expect HPE's recent outperformance will create a more challenging trading setup into earnings, though we still see significant opportunity for upside relative to the company's F2026 and F2027 guidance framework. Bulls characterize HPE's F2027 guidance targets for 8-12% revenue growth in both segments as conservative given the robust demand backdrop for CPU servers and data center networking. Bulls also point to improving margins in HPE's Networking segment (from low 20s% to mid-to-high 20s% in F2027) from scale and merger integrations as a point of differentiation relative to data center networking peers who are seeing margin pressure from elevated input costs & increasing hyperscale customer concentrations.

Bears remain more cautious around HPE's ability to manage (1) memory headwinds (see more limited upside to Server revenue) with potentially greater-than-feared margin impact; (2) HPE's AI server strategy; and (3) the ongoing integration of Juniper and HPE Aruba, including potential market share loss in campus networking.

Our view on key metrics and our estimates: We expect F3Q26 revenue of $12.0 bn (v. FactSet consensus $11.9 bn and guidance $11.5-$12.1 bn) driven by outperformance in Cloud & AI (+22% year-over-year growth v. high teens % guidance) and in-line Networking (+77% year-over-year v. guidance for +73% to +78% growth). Because HPE's CPU server exposure is primarily to enterprise (v. DELL and SMCI who have neocloud exposure), we expect upside in the quarter and coming quarters will be driven more by pricing than by volumes because of limited supply, though we do expect the company to build a significant backlog into F2027. Similarly, we expect Networking segment order trends in F3Q27 to be well ahead of revenue growth in the quarter (GSe: +11% v. guidance for +10% normalized), setting up accelerating Networking revenue throughout C2027. Our non-GAAP EBIT margin outlook of 14.1% is modestly above consensus of 13.9%, with Cloud & AI margins of 13.1% (v. guidance for low-to-mid teens %) and Networking margins of 21.5% (v. guidance for low 20s%). Our F3Q27 EPS estimates of $0.94 is slightly above the high-end of guidance ($0.88-$0.93) and consensus of $0.92.

Estimate and Target Price Changes

We increase our F2026/27/28 non-GAAP EPS estimate by 2% on average on higher networking revenue.

We are **Buy** rated on HPE with a 12-month target price of $75 (v. $79 prior) reflecting 17X (v. 18x prior) our NTM+1Y EPS. We lower our multiple to reflect increased intensity of competition in both the CPU server and data center networking markets.

Key risks: (-) Lower-than-expected corporate IT spending and data center capex could result in worse-than-expected hardware sales; (-) Competition from white box manufacturers could result in cannibalization in HPE's server market share; (-) Market share loss from customer churn during Juniper integration; (-) Component costs could be higher than expected, resulting in worse gross margins; (-) Corporate actions from strategic investors; (-) Failure to deliver market share gains in storage driven by a strategy shift towards selling more owned-IP storage products that carry higher gross margins; (-) Worse-than-expected demand for enterprise and sovereign AI data center infrastructure.

NTAP (Buy)

Setup into the print: NTAP's market outperformance in C2Q26 (+86% from 4/1/26-8/7/26 v. S&P500 +18%) has been driven by investor enthusiasm for enterprise infrastructure spend. Investors who are more constructive on NTAP see the company (and the enterprise storage category more broadly) as well-positioned to benefit from incremental demand for enterprise AI on-premise/hybrid deployments, with better elasticity of demand for storage appliances vendors to pass through higher prices through to customers to offset rising input costs. In particular, bulls point to NTAP's market share leadership in unstructured data storage platforms (19% share in 1Q26, per IDC) and new product releases (AFX, AIDE) as well positioned to address enterprise AI

on-premise infrastructure demand and therefore as drivers of potential upside to medium-term revenue/EPS estimates. Bulls are also constructive on the momentum in NTAP's public cloud business (where NTAP supports hyperscale cloud storage platforms through its first-party offering) as a source of high-margin upside if enterprise customers are to engage more with cloud storage solutions. That said, NTAP's ability to protect margins through pricing and benefit from incremental AI-related demand will take a few quarters to demonstrate, which may create some noise in the near term as the company digests higher component costs. Those who are more cautious see downside to product gross margins from continued pressure on input costs & broader adoption of LTAs.

Our view on key metrics and our estimates: We expect F1Q27 EPS of $2.12, slightly above the midpoint of NTAP's guidance ($2.05-$2.15) and in line with consensus of $2.11, with revenue of $1.81 bn, gross margins of 69.7% and EBIT margins of 29.2% in-line with guidance. We raise our F2027/28/29 revenue and EPS estimates by 5% and 4% on average, respectively, on greater product revenue from higher ASPs as we expect NTAP to price through the vast majority of increasing input costs. Our F2027/28/29 EPS outlook is ~4% above Visible Alpha Consensus Data on this raised revenue outlook.

Estimate and Target Price Changes

We increase our F2027/28/29 non-GAAP EPS estimate by 5% on average on storage appliance ASPs.

We are **Buy** rated on NTAP with a 12-month target price of $210 (v. $200 prior) reflecting 20x (v. unchanged) our NTM+1Y EPS.

Key risks: (-) Key supply shortages or pricing increases that weigh on product gross margins; (-) structural declines in demand for on-premise enterprise storage appliances; (-) increased competitiveness of storage market from legacy players and new-entrants, particular in growth areas like parallel file systems; (-) evolving demand for as-a-service offerings like Keystone in a changing interest rate environment; (-) impact of global macro weakness on demand for storage

Exhibit 26: NTAP F1Q27 estimate changes
$ mn, except per share data

HPQ (Sell)

Setup into the print: HPQ has outperormed the market since it last reported earnings on 5/27/26 (+18% v. S&P +3%, GS hardware coverage +39%) as investors see a potentially more constructive memory supply backdrop, with HPQ reported to be testing memory chips from an expanded list of vendors including CXMT. While this might

increase HPQ's ability to procure memory, more bearish investors do not expect CXMT memory will impact HPQ's PC input costs meaningfully. Specifically, these more bearish investors remain skeptical that the company's self-help actions (more WXP attach, more peripherals, broader cost take out, pricing actions) will drive PC segment margins to recovery after troughing in F4Q. HPQ continues to underperform the broader PC industry per IDC, with C2Q26 revenue +12% year-over-year (v. industry +14%) on -9% decrease in units (v. industry -4%) and +23% increase in pricing (v. industry +19%). Investors who are more negative on HPQ may interpret this share loss as due to supply issues (i.e., HPQ unable to stock inventory of PCs because of limited DRAM allocation), while more bullish investors may attribute it to HPQ's strategic shift towards placing more premium units (which are higher ASP and better margin). Per IDC, HPQ gained +2 points of share in premium consumer (ASP >$800) in C2Q26 but lost 1 pt of commercial market share. HPQ's CEO search is still under way, but the board remains committed to returning ~100% of FCF to shareholders (as long as gross leverage <2X).

Our view on key metrics and our estimates: We expect F3Q26 EPS of $0.69 to be at the high end of guidance of $0.61-$0.71, benefiting from stronger PC ASPs in the quarter. Specifically, we estimate HPQ PC units -9% year-over-year in F3Q26 will be more than offset by +23% growth in PC ASPs in the quarter, driving revenue in the Personal Systems segment up +11% year-over-year or +8% quarter-over-quarter (v. guidance for below seasonal growth; +10% QoQ). We modestly raise our full-year PC revenue expectations on higher pricing and lower our Printing margins on elevated hardware placements. Our estimates to not reflect any benefits from tariff or tariff related refunds (*see 'Will US hardware OEMs benefit from tariff refunds?' for more details).*

Estimate and Target Price Changes

Our F2026/27/28 EPS estimates are unchanged on average.

We are **Sell rated** on **HPQ** with a 12-month target price of $21 (v. $19 prior) reflecting 6.5X (v. 6.0x prior) our NTM+1Y EPS. We increase our target multiple 0.5x on HPQ's strong operating discipline around pricing/securing supply year-to-date.

Key risks: (+) Better-than-expected industry PC demand; (+) Better-than-feared impact of higher input costs on margins; (+) Market share gains in PC, especially in higher-margin categories like gaming PCs and peripherals; (+) Recovery in office and consumer industry demand; (+) Print portfolio shift towards growth opportunities, such as Big Tank (profit up front model), consumer subscriptions (e.g., Instant Ink, Instant Paper, HP+), and industrial print.

Reg AC

I, Katherine Murphy, hereby certify that all of the views expressed in this report accurately reflect my personal views about the subject company or companies and its or their securities. I also certify that no part of my compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

Contributing Authors: Katherine Murphy Goldman Sachs & Co. LLC, Michael Ng, CFA Goldman Sachs & Co. LLC.

Unless otherwise stated, the individuals listed in the Contributing Authors disclosure of this report are analysts in Goldman Sachs' Global Investment Research division.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Disclosures

The rating(s) for Dell Technologies Inc., HP Inc., Hewlett Packard Enterprise Co. and NetApp Inc. is/are relative to the other companies in its/their coverage universe: AT&T Inc., American Tower Corp., Apple Inc., Arista Networks Inc., Axon Enterprise Inc., Blend Labs, Celestica Inc., Charter Communications Inc., Cisco Systems Inc., Cogent Communications Holdings, Comcast Corp., Compass Inc., Crown Castle Inc., Dell Technologies Inc., Digital Realty Trust Inc., Equinix Inc., F5 Inc., HP Inc., Hewlett Packard Enterprise Co., IREN Ltd., Ingram Micro, Lumen Technologies Inc., NetApp Inc., Opendoor Technologies Inc., Optimum Communications Inc., Penguin Solutions Inc., SBA Communications Corp., Stagwell Inc., Super Micro Computer Inc., T-Mobile US Inc., TD SYNNEX Corp., Verizon Communications, Versant Media Group, Walt Disney Co., Zillow Group

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; registered market maker. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with a subject company, public appearances and trading in securities covered by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at https://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities

and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 10th Floor, Ascent-Worli, Sudam Kalu Ahire Marg, Worli, Mumbai-400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. Registration granted by SEBI and certification from NISM in no way guarantee performance of the intermediary or provide any assurance of returns to investors. Goldman Sachs (India) Securities Private Limited compliance officer and investor grievance contact details, a copy of the annual compliance audit report and other relevant information and disclosures can be found at this link: https://www.goldmansachs.com/worldwide/india/research-analyst. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan Type II Financial Instruments Firms Association, and Investment Management Association of Japan. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.

Global product; distributing entities

Goldman Sachs Global Investment Research produces and distributes research products for clients of Goldman Sachs on a global basis. Kingdom.

Goldman Sachs International ("GSI"), authorised by the Prudential Regulation Authority ("PRA") and regulated by the Financial Conduct Authority ("FCA") and the PRA, has approved this research in connection with its distribution in the United Kingdom.

European Economic Area: Goldman Sachs Bank Europe SE ("GSBE") is a credit institution incorporated in Germany and, within the Single Supervisory Mechanism, subject to direct prudential supervision by the European Central Bank and in other respects supervised by German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin) and Deutsche Bundesbank and disseminates research within the European Economic Area.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (https://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage universe as described herein.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, make a market or act as liquidity provider in, and buy or sell, any securities, derivatives, or other financial instruments referred to in this research (including any financial instruments issued by the companies referred to herein), unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp and https://www.goldmansachs.com/disclosures/cftc_fcm_disclosures. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to https://research.gs.com.

Disclosure information is also available at https://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.
