Bottom Line: 1) In a world of ongoing supply shortages, Microsoft's comments on capex were balanced: Microsoft already has a framework for the right long-term investments in land and power, and a good understanding of the quantum of capacity it can bring on in the next year. Instead, its focus is on how quickly it can get new supply "revenue ready". 2) Microsoft detailed its moats in distribution and technical stack as enterprises move to "frontier ecosystems", enabling customers to run continuous learning loops on their own data in a way that grows TAM and IP creation holistically. The transition to consumption/outcomes-based billing is proving that delivering better outcomes can be TAM expansive.

Key Takeaways

- **Near-term focus on accelerating capacity monetization.** In a world of ongoing supply shortages, Microsoft's comments on capex were balanced: Microsoft already has a framework for the right long-term investments in land and power, and a good understanding of the quantum of capacity it can bring on in the next year. Instead, its focus is on how quickly it can get new supply "revenue ready". The company reiterated its >50% reduction in dock-to-live times over the past year and pointed to efficiency gains across hardware, Azure infrastructure, and application layers that are expanding effective supply without a commensurate increase in capital intensity. With the amount of GW of new infrastructure able to come online over the NTM largely fixed, Microsoft's focus is on accelerating the pace at which deployed capacity becomes revenue generating, effectively extracting more Azure growth from every dollar of capital already invested.
- **AI expands the software TAM through outcome-based consumption.** Microsoft described AI as accelerating a shift from seat-based licensing toward pricing aligned with units of work, outcomes, and productivity delivered. The company pushed back on the notion that AI simply reallocates existing software

Goldman Sachs does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Analysts employed by non-US affiliates are not registered/qualified as research analysts with FINRA in the U.S.

budgets, arguing instead that AI enables new workflows, new business processes, and entirely new revenue opportunities that were previously uneconomic or impossible to deliver. In this framework, AI is not just an efficiency tool but a mechanism for expanding software spend by creating incremental demand for new outcomes. At the same time, Microsoft emphasized that enterprise adoption increasingly depends on the ability to measure, govern, and optimize AI usage. Agent 365 is the control plane that helps customers monitor consumption, manage costs, and validate ROI across models and workflows, reflecting a view that observability and spend management may become as important to enterprise deployment as model performance itself.

- **Price performance remains the primary objective of Microsoft's silicon strategy.** Microsoft described its silicon strategy as an extension of the cloud approach that has supported margin improvement for more than a decade: diversify suppliers, develop 1P capabilities where it improves economics, and optimize workloads around the best price-performance outcome. The company highlighted the continued expansion of Cobalt CPUs, which are expected to be deployed across 25 data centers this year, and expressed confidence in the performance of MAIA. Importantly, Microsoft was clear that the objective is not simply to replace 3P silicon with internally developed alternatives. Instead, 1P chips represent an additional tool within a broader multi-vendor ecosystem, enabling Microsoft to match workloads to the most efficient compute architecture available while improving flexibility, enhancing long-term infrastructure competitiveness, and improving returns on infrastructure investment.

Valuation/Risks

We maintain our 12-month price target of $640, based on a 28x P/E (unchanged) multiple to Microsoft's SNTM adjusted net income.

Key downside risks include: longer ramp for internal silicon, which can limit market share gains or gross margin expansion; greater investments in projects outside of expectations (e.g., non-Azure); key leadership changes; and more meaningful shift to custom software that could negatively impact its applications business.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspende** Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs company.
