# Flows & Liquidity

## Bottoming out?

- **Our overall equity positioning metric points to significantly lower equity positioning currently from the recent peak in mid-September.**
- **This suggests that while some of the near-term headwinds we noted last week remain in place, there has been some signs of adjustments in positioning that could start to limit downside from here.**
- **Neoclouds are neither a critical nor large segment of the overall AI ecosystem.**
- **Little sign of diversification flows out of the US at the aggregate level.**
- **While various US regulatory bodies enact rules to encourage institutional participation in the crypto ecosystem, somewhat offsetting the negative from the failure of the Congress to pass the Clarity Act, elevated political and legal risk premia are likely to persist over the longer term until comprehensive market-structure legislation is eventually passed.**

J.P.Morgan

- The funding concerns around neoclouds (specialized AI infrastructure providers that rent out compute for AI workloads) have taken center stage over the past week. Is the funding model of neoclouds unsustainable? How important are neoclouds for the overall AI ecosystem? Are concerns about neoclouds threaten overall AI capex financing warranted?
- Our colleagues in credit research covering publicly listed neoclouds (see Technology & Telecom Weekly by Egan et al.) have answered the first question: as funding costs via high yield debt markets rise for publicly listed neoclouds, they might need to become more inventive with their financing relying less on company debt and shifting more towards equity financing and project specific debt. And our colleagues in equity research note that while an increase in the cost of capital given concerns in debt markets and the rise in yields more broadly could limit headroom for return generation, the favorable demand backdrop for compute can also enable some passing on of the cost through to customers (CoreWeave, Chatterjee et al, Oct 16th).
- But even in an adverse scenario where this thesis does not play out and eventually the funding model of publicly listed neoclouds becomes unviable because of the timing mismatch between their capex and revenues, we do not believe that the AI capex cycle will be derailed for two reasons.
- First, publicly listed neoclouds are a relatively small segment of the overall AI ecosystem. From the roughly $2.2tr of cash flows (Figure 1) and $1.8tr of capex (Figure 2) projected by analysts for publicly listed tech companies globally for this year, neoclouds account for around $30bn and $80bn, respectively. In other words, the build-up of AI infrastructure by neoclouds could be absorbed by other tech companies with stronger balance sheets and more diverse revenue sources, such as hyperscalers.

**Figure 1: Tech sector trailing 12m operating cash flows**

**Figure 2: Tech sector trailing 12m Capital expenditures and R&D Expenses**

In $bn. 2026 represents a projection based on the YTD trajectory.

Source: Bloomberg Finance L.P., J.P. Morgan Flows & Liquidity.

- Second, the tech sector overall is still running a financing surplus of around $400bn for this year as cash flows exceed capex. Therefore, at an aggregate level, the tech sector does not need external financing. And it might be able to run a surplus for years to come. Figure 3 shows that in a hypothetical scenario where the tech sector grows its capex by 25% a year in the five-year period to 2030, and grows its cash flows by 20% a year, there could still be a slight surplus by 2030.

**Figure 3: Financing gap projections for the tech sector**

In $bn.

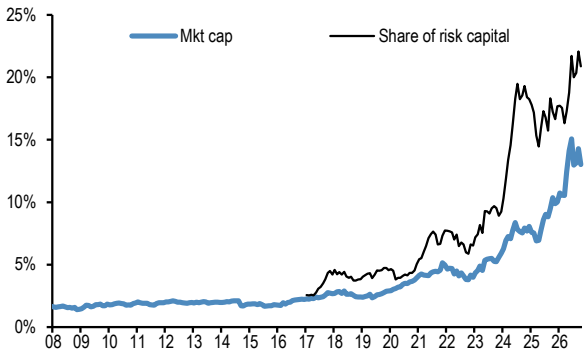

| | 2025 | 2026 | 2027 | 2028 | 2029 | 2030 |
|---|---|---|---|---|---|---|
| cash flows | 1652 | 2150 | 2640 | 3130 | 3621 | 4111 |
| capex | 1336 | 1750 | 2332 | 2914 | 3495 | 4077 |
| cash flows-capex | 316 | 400 | 308 | 217 | 125 | 34 |
| financing gap after buybacks/dividends | -384 | -500 | -696 | -936 | -1176 | -1284 |
| net debt required to close the financing gap | 384 | 500 | 696 | 936 | 1176 | 1284 |
| net debt raised via loans/SPVs/private credit | 230 | 175 | 348 | 468 | 588 | 642 |
| net debt raised via bond issuance | 154 | 325 | 348 | 468 | 588 | 642 |

Source: J.P. Morgan Flows & Liquidity.

- Why is the tech sector issuing debt then? As shown in Figure 3, the tech sector is still deploying a large amount of share buybacks and it is mostly because the tech sector seeks to maintain these buybacks even as it undertakes more capex that is in need for external financing. In an adverse scenario where current funding concerns start spreading to other tech companies beyond neoclouds, tech companies would in principle be able to respond by postponing buybacks and engaging in more circular financing, i.e. the tech companies with financing surpluses such as chip makers to help fund tech companies with financing deficits such as neoclouds. In other words, by running a financing surplus in aggregate, the tech sector holds internal funding backstops.
- And as we argued previously in our publication (see F&L August 20th) the AI capex and cash flow cycle is underpinned by spending on AI by large enterprises which based on surveys could reach $1.5tr globally this year.
- It also important to put the latest correction in AI infrastructure stocks into the context of a higher frequency of semiconductor VaR shocks. As we argued in our publication last June (F&L, Jun 17th), since the second quarter of this year we have likely entered a new phase in equity markets where semiconductor VaR shocks would become more frequent even if the fundamentals of the AI cycle remain robust. This is because of the meteoric rise in the share of semiconductor stocks including memory stocks in overall equity markets. VaR shocks do not necessarily need to have a fundamental trigger, but rather often reflect positioning adjustments. A combination of two structural forces, rising equity allocation and low net equity supply, has helped induce lower equity volatility, meaning that investors with risk budgets such as VaR frameworks have tended to take larger positions when vol is low and are forced to cut positions as market vol rises, which can trigger self-reinforcing volatility-induced selling.
- As we had noted in our previous publication, this rise in the market cap weight of semiconductors has made investors more exposed to this sector. But even this share in the market cap weight arguably understates the importance of semiconductors given the rise in volatility relative to the broader equity market. To estimate the share of risk capital taken up by semiconductors, we first estimate the shares of risk capital of each sector in the MSCI ACWI index as their share of market capitalization multiplied by its 6-month annualized volatility. For the information technology sector overall, the current share of risk capital in the broader MSCI ACWI index is at around 40% vs. its 28% market cap weight. And of this, the semiconductor industry group is around 21% vs. its 13% market cap weight, with Figure 4 showing how the risk capital weight of semiconductors has evolved over time. In other words, companies in the semiconductor index effectively consume around a fifth of the total risk capital in global equity markets.

**Figure 4: Share of semiconductors in the MSCI ACWI index by market cap and by risk capital**

In %.

Source: Bloomberg Finance L.P., J.P. Morgan Flows & Liquidity.

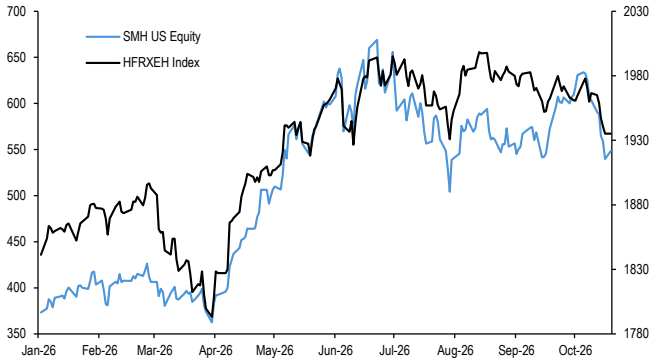

- And this vulnerability of VaR sensitive investors such as hedge funds and asset managers has been recently reflected in the closeness of their performance to the performance of semiconductor stocks. Indeed, when we look at the movements of semiconductor stocks (the SMH US ETF) and the HFRX equity hedge index of daily reporting equity hedge funds (which includes equity quant hedge funds), these movements have closely followed each other since late September (Figure 5), similar to what had taken place earlier this year from early April to late July. In the upswing this is indicative of elevated positioning among hedge funds, but in corrections given tight risk limits among hedge funds this increased co-movement can be indicative of forced de-risking that amplifies the drawdown. Given the recent declines in semiconductor stocks, we suspect that the previous overhang of elevated long semiconductor exposures has been largely unwound by hedge funds including momentum-based investors such as CTAs as shown in Figure 6. In addition, our overall equity

## Little sign of diversification flows out of the US at the aggregate level

- In the aftermath of the "Liberation Day" tariff announcement last year the question of diversification flows had emerged in our client conversations, and resurfaced this year amid tensions over Greenland and after the start of the Middle East conflict. How have these concerns played out in recent months?
- The US TIC data currently covers 2026 up to August, depicted in Figure 8. It suggests that foreign purchases of both US equities and bonds have remained relatively strong in recent months. While the combined net purchases in July of $40bn were the weakest since the net sales in April 2025, August purchases rebounded strongly to around $300bn in total. Looking through the monthly volatility, the average pace of net purchases in 2026 to-date of around $75bn per month of equities and just under $85bn per month in bonds have both been stronger than their respective averages in 2025 of just over $60bn and just under $75bn per month respectively. In other words, there is little sign that fears over "de-dollarization" flows out of US assets have been translated into sustained outflows at the aggregate level.

**Figure 8: Net purchases of US equities and bonds by foreign investors**

In $bn.

Source: US TIC, J.P. Morgan Flows & Liquidity.

- What about cross-border flows more broadly? Figure 9 shows the net flows from the liability side of the US, Euro area and Japanese balance of payments, i.e. net purchases of portfolio assets by foreign investors for each economy. It suggests that similar to the US, looking through monthly volatility net inflows into European and Japanese assets have remained relatively strong overall YTD. For Euro area bonds inflows had been stronger YTD than for the full year 2025, though August did see some modest outflows before the widening in French spreads to Bunds began in earnest in September.

**Figure 9: Net inflows into US, Euro area and Japanese portfolio assets from foreign investors in 2025 and 2026 to-date**

In $bn.

| 2026 YTD | 608 | 671 | 362 | 538 | 61 | 94 |

Source: J.P. Morgan Flows & Liquidity.

- Where there has been some evidence of diversifying away from US assets is among FX reserve managers where the dollar share of reserves has declined. But this has been a long-standing trend, as shown in Figure 10. And at the aggregate level, when we look at total reserves, the main beneficiary has been gold.

**Figure 10: Share of gold, the dollar and other currencies of total reserves**

In %. Total reserves defined as COFER reserves + central bank gold holdings.

Source: IMF, World Gold Council, Bloomberg Finance L.P., J.P. Morgan Flows & Liquidity.

- Similarly, there had been some evider hedge ratios in 1H25 among Danish a funds (Figure 11 and Figure 12) and a superannuation funds in 2H25 (Figur has seen a reversal among the Danish funds' FX hedge ratios, while for Aus tion funds the hedge ratios have been

**Figure 13: Currency hedge ratio for foreign equity holdings of Australian super funds**

Hedge ratios, % of foreign portfolio for listed equities, last obs is for Q2 2026.

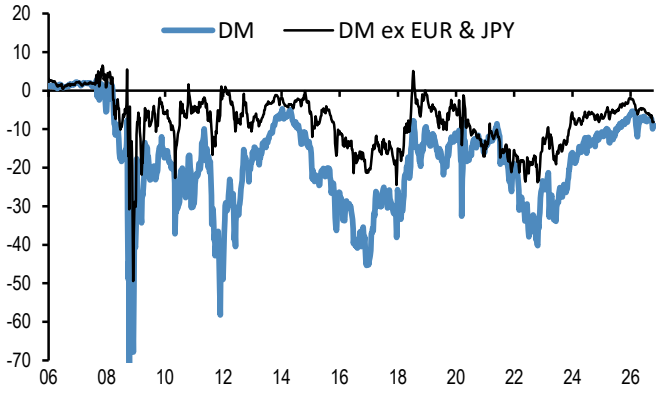

Source: APRA, J.P. Morgan Flows & Liquidity.

- More broadly, as we have noted previously (F&L, Jul 9th 2025) there is a strong link between hedging demand and the cross-currency basis. This suggests that if there is a significant increase in hedging activity, it should show up in the cross-currency basis. However, when we look at cross-currency basis swaps across major DM currencies (EUR, JPY, GBP, AUD, CAD and CHF) in Figure 14, the basis remains consistent with only a modest inclination to hedge dollar exposures.

**Figure 14: 1y dollar FX basis**

In bps. Weighted average basis of the basis of USD-DM pairs: EUR, JPY, CAD, AUD and CHF.

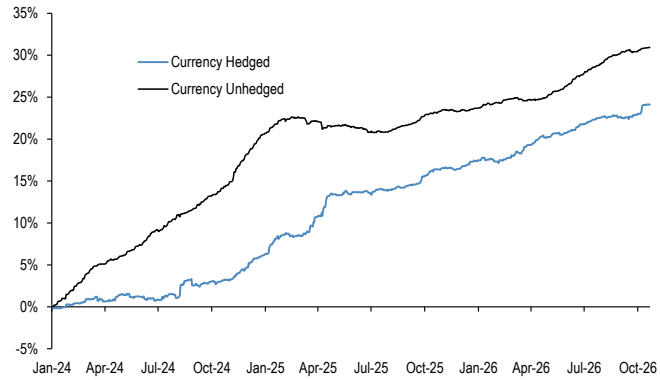

Source: Bloomberg Finance L.P., J.P. Morgan Flows & Liquidity.

- Finally, there is little sign of increased demand for hedges via inflows into currency-hedged US equity ETFs domiciled outside the US relative to unhedged ETFs beyond early 2025 (Figure 15). If anything, since late April there have been proportionally larger flows into currency-unhedged US equity ETFs than currency-hedged ETFs have continued, even with the recent rise in the latter in early October.

**Figure 15: Cumulative inflow into top 100 currency-hedged and top 100 currency unhedged US equity ETFs domiciled outside the US as a % of AUM**

## Regulator-led measures can encourage institutional participation in the crypto ecosystem over the near term, but only legislation would make the framework more durable over the longer term

- The Senate's failure to advance the CLARITY Act on September 15th could have been a major setback for crypto markets. Instead, crypto market sentiment has stayed relatively constructive, even as passage this year now looks unlikely and hopes shift to 2027. In the meantime, attention has moved to what regulators can do now. Agencies such as the SEC, CFTC, and OCC are using existing authority to remove practical frictions that have kept many institutions on the sidelines. For markets, the key issue is less the precise legal label of the framework and more whether it creates workable, regulated channels for institutional participation.
- The SEC is laying the groundwork for regulated tokenization. It is developing a pathway for tokenized securities, which are digital representations of traditional assets, through a proposed five-year Innovation Exemption. This would allow tokenized versions of listed equities to trade for longer hours, potentially 24/7, on tightly controlled venues, with faster settlement. Any token would need to preserve the same economic exposure and shareholder voting rights as the underlying stock. The scope, however, is intentionally narrow and excludes synthetic tokens. Venues would face limits on how many names they can support and how large token trading can become relative to the traditional market.
- Importantly, issuers can opt out of having their shares tokenized. In recent weeks, we've seen more companies exercise this option. In turn, this dented sentiment for application tokens such as ethereum with outflows from ethereum ETFs (Figure 16) and a deterioration in its futures-position proxy (Figure 17 and Figure 18). This contrasts with the initial period following the September 15th SEC announcement, when both ETF flows and our futures-position proxy had increased.

**Figure 16: Daily flows into spot bitcoin ETFs, spot ethereum ETFs and leveraged MicroStrategy ETF**

leveraged crypto activity onshore. Most leveraged crypto trading today occurs on offshore venues that many US participants cannot access. The CFTC has floated the idea of a new market category that could enable leveraged retail trading on compliant US platforms, with customer accounts and assets generally held through registered intermediaries. This remains early stage and is best viewed as a request for feedback rather than a final proposal, and meaningful implementation is unlikely before 2027. Still, the benefit could be indirect but important. Activity that migrates onshore can deepen liquidity, improve price formation, and eventually support the development of more liquid regulated venues that institutions are more likely to use.

- From a regulatory point of view, stablecoins have been the most durable segment so far. Supported by the GENIUS Act and related regulatory actions, stablecoins are increasingly being positioned as a practical tool for payments and liquidity. The OCC has granted national trust charters to a growing set of stablecoin issuers and digital asset firms, bringing activities like custody, reserve management, and issuance under federal oversight. These charters are not immune from challenge, as community banks, through the ICBA, have sued the OCC over aspects of the approvals. Even so, once granted, charters tend to be difficult to unwind in practice.
- Finally, the FASB is considering accounting treatment that would allow corporate treasuries to classify certain qualifying stablecoins as cash equivalents on the balance sheet. The proposal is open for comment until November 19. Adoption would support broader use beyond crypto trading, toward payments and liquidity management for corporates and institutions.
- In all, while various US regulatory bodies enact rules to encourage institutional participation in the crypto ecosystem, somewhat offsetting the negative from the failure of the Congress to pass the Clarity Act, elevated political and legal risk premia are likely to persist until comprehensive market-structure legislation is eventually passed. For now, the crypto industry has to rely on a patchwork of regulatory actions that could be overturned in as soon as two years, if a Democrat wins the White House.

## Table A2: Trading turnover monitor

Volumes are monthly and Turnover ratio is annualised (monthly trading volume annualised divided by the amount outstanding). UST Cash is primary dealer transactions in all US government securities. UST futures are from Bloomberg Finance L.P. JGBs are OTC volumes in all Japanese government securities. Bunds, Gold, Oil and Copper are futures. Gold includes Gold ETFs. Min-Max chart is based on Turnover ratio. For Bunds and Commodities, futures trading volumes are used while the outstanding amount is proxied by open interest. The diamond reflects the latest turnover observation. The thin blue line marks the distance between the min and max for the complete time series since Jan-2005 onwards. Y/Y change is change in YTD notional volumes over the same period last year.

| As of Sep-26 | MIN | MAX | Turnover ratio | Vol (tr) | y/y chng |
|---|---|---|---|---|---|
| **Equities** | | | | | |
| EM Equity | | | 1.1 | $1.4 | 108% |
| DM Equity | | | 1.4 | $14.8 | 43% |
| **Govt Bonds** | | | | | |
| UST cash | | | 13.8 | $24.8 | 12% |
| UST futures | | | 0.8 | $19.6 | 12% |
| JGBs | | | 45.7 | ¥4,268 | 12% |
| Bund futures | | | 1.5 | €14.1 | 25% |
| **Credit** | | | | | |
| US HG | | | 1.1 | $0.8 | 16% |
| US HY | | | 0.3 | $0.1 | -7% |
| US Convertibles | | | 3.0 | $0.03 | 6% |
| **Commodities** | | | | | |
| Gold | | | 59.5 | $1.9 | 26% |
| Oil | | | 89.7 | $3.8 | 13% |
| Copper | | | 2.0 | $1.0 | 68% |
| **Digital Assets** | | | | | |
| CME Bitcoin | | | 113.8 | $0.087 | -33% |
| CME Ethereum | | | 125.4 | $0.041 | -20% |

## Chart A11a: Cross Asset Volatility Monitor 3m ATM Implied Volatility (1y history), as of 19th Oct-2026

This table shows the richness/cheapness of current three-month implied volatility levels (red dot) against their one-year historical range (thin blue bar) and the ratio to current realised volatility. Assets with implied volatility outside their 25th/75th percentile range (thick blue bar) are highlighted. The implied-to-realised volatility ratio uses 3-month implied volatilities and 1-month (around 21 trading days) realised volatilities for each asset.

| Asset | Current | Low | Low date | High | High date | | Upside | Downside | Implied/realized volatility |
|---|---|---|---|---|---|---|---|---|---|
| S&P 500 | 15% | 14% | 03-Sep-26 | 24% | 27-Mar-26 | | 9% | 1% | 1.55x |
| EuroSTOXX | 16% | 14% | 05-Jan-26 | 26% | 27-Mar-26 | | 10% | 3% | 1.35x |
| Nikkei 225 | 27% | 20% | 25-Dec-25 | 33% | 31-Mar-26 | | 6% | 7% | 0.91x |

Source: Bloomberg Finance L.P., J.P. Morgan Flows & Liquidity.

Note: Swaps volatility is 3m 10y payer ATMF implied annualized BP vol and credit volatility is 3m 5y on-the-run ATM spread volatility. MSCI EM, Gold, Oil, Copper, BB Commodity Index and Treasury futures are 3m implied vol from Bloomberg.

**Definitions:**

| | |
|---|---|
| Current: | Latest available closing level (19-Oct-26) |
| Low: | Lowest closing level in the last 1y |
| Low date: | Date the lowest closing level was reached (or the first time it was reached in the case of several identical low closing levels) |
| High: | Highest closing level in the last 1y |
| High date: | Date the highest closing level was reached (or the first time it was reached in the case of several identical high closing levels) |
| Graph: | Shows the current level and the 25th/75th percentile relative to the 1y high/low |
| Upside: | Implied return/volatility percentage points from current level up to the High (note: return is calculated as simple difference for spread products) |
| Upside (σ): | Upside in terms of standard deviations (Upside / Current 1y realized volatility) |
| Downside: | Implied return/volatility percentage points from current level down to the Low (note: return calculated as simple difference for spread products) |
| Downside (σ): | Downside in terms of standard deviations (Downside / Current 1y realized volatility) |
| Implied/realized volatility: | Current 3m implied volatility / current realized 3m volatility |

## Chart A11b: Option skew monitor

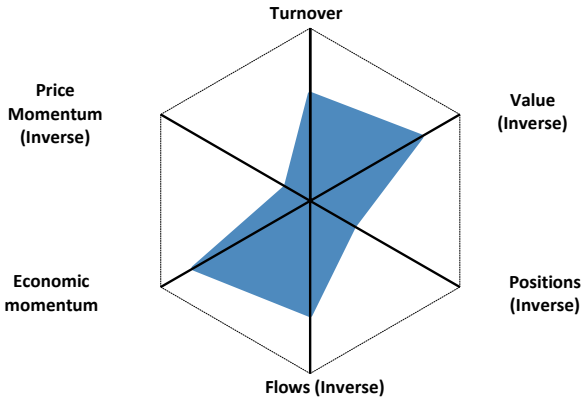

Skew is the difference between the implied volatility of out-of-the-money (OTM) call options and put options. A positive skew implies more demand for calls than puts and a negative skew, higher demand for puts than calls. It can therefore be seen as an indicator of risk perception in that a highly negative skew in equities is indicative of a bearish view. The chart shows z-score of the skew, i.e. the skew minus a rolling 2-year avg skew divided by a rolling two-year standard deviation of the skew. A negative skew on iTraxx Main means investors favour buying protection, i.e. a short risk position. A positive skew for the Bund reflects a long duration view, also a short risk position.

Source: J.P. Morgan Flows & Liquidity.

## Chart A11c: Equity market health map

Each of the six axes corresponds to a key indicator for markets. The position of the blue line on each axis shows how far the current observation is from the extremes at either end of the scale. Overall, the larger the blue area within the hexagon, the better the outlook for the S&P500. All variables are expressed as the percentile of the distribution that the observation falls into. I.e. a reading in the middle of the axis means that the observation falls exactly at the median of all historical observations. **Turnover**: Percentile rank of the 21-day rolling S&P500 turnover since 2007. **Value**: Inverse of percentile rank of our quarterly S&P 500 Equity Risk Premium (ERP) estimate since 1957 as described in "A fair value model for US Bonds, Credit and Equities", Panigirtzoglou and Loeys, Jun 2005. **Positions**: Percentile rank of the difference between government bonds and equity positioning from the cross-asset positioning monitor on the front page of our publication since 2016. **Flows**: Inverse of percentile rank of the difference between equity and bond fund flows from the cross-asset fund flow monitor on the front page of our publication since 2007. **Economic momentum**: Percentile rank of the 2-month change in the global manufacturing PMI since 1998, see "REVISITING: Using the Global PMI as trading signal", Nikolaos Panigirtzoglou, Jan 2012). **Price momentum**: Inverse of the percentile rank of the z-score of the difference in the momentum signal of S&P500 vs. 10y USTs since 2016 (based on the average z-score of Short- and Long-term momentum signal in our Trend Following Strategy framework shown in Tables A3 and A4 in the Appendix). China onshore A-share ETFs have been excluded. Last obs. as of 16th Oct.

# Spec position monitor

## Chart A12: Weekly Spec Position Monitor

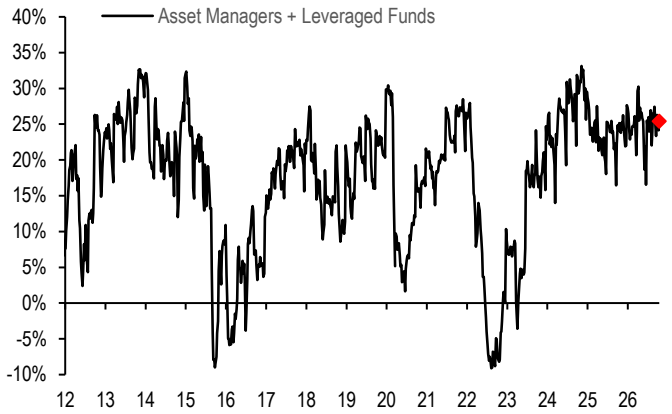

Net spec positions are proxied by the number of long contracts minus the number of short contracts using the speculative category of the Commitments of Traders reports (as reported by CFTC). To proxy for speculative investors for equity and US Treasury bond futures positions we use Asset managers and leveraged funds (see Chart A13), whereas for other assets we use the legacy Non-Commercial category. This net position is then converted to a dollar amount by multiplying by the contract size and then the corresponding futures price. We then scale the net positions by open interest. The chart shows the z-score of these net positions. US rates is a duration-weighted composite of the individual UST futures contracts excluding the Eurodollar contract.

Source: Bloomberg Finance L.P., CFTC, J.P. Morgan Flows & Liquidity.

## Chart A13: Positions in US equity futures by Asset managers and Leveraged funds

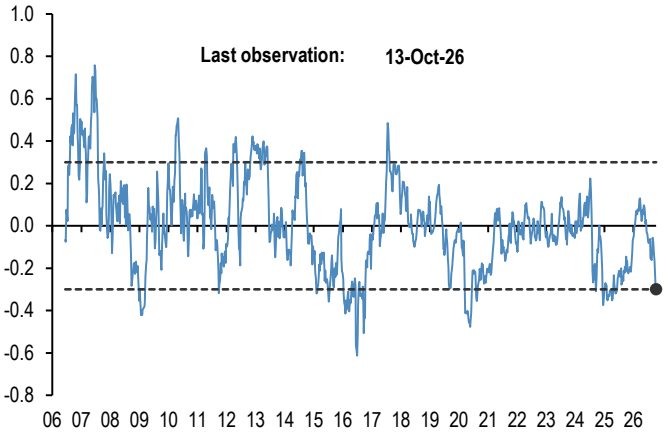

CFTC positions in US equity futures by Leveraged funds and Asset managers (as a % of open interest). It is an aggregate of the S&P500, DowJones, NASDAQ and their Mini futures contracts.

Source: CFTC, Bloomberg Finance L.P. and J.P. Morgan Flows & Liquidity.

## Chart A14: Spec position indicator on Risky vs. Safe currencies

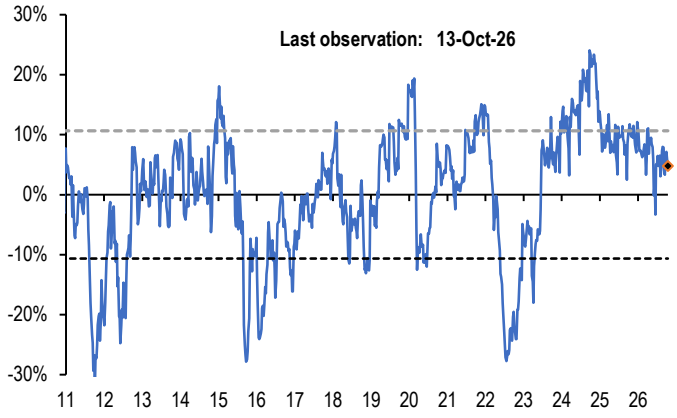

Difference between net spec positions on risky & safe currencies. Net spec position is calculated in USD across 5 'risky' and 3 'safe' currencies (safe currencies also include Gold). These positions are then scaled by open interest and we take an average of 'risky' and 'safe' assets to create two series. The chart is then simply the difference between the"risky" and "safe" series. The final series shown in the chart below is demeaned using data since 2006. The risky currencies are: AUD, NZD,CAD, MXN and BRL. The safe currencies are: JPY, CHF and Gold.

Source: Bloomberg Finance L.P., CFTC, J.P. Morgan Flows & Liquidity.

## Chart A15: Spec position indicator on US equity futures vs. intermediate sector UST futures

Difference between net spec positions on US equity futures vs. intermediate sector UST futures. This indicator is derived by the difference between total CFTC positions in US equity futures by Asset managers + Leveraged Funds scaled by open interest minus the Asset managers + Leveraged Funds spec position on intermediate sector UST futures (i.e. all UST futures duration weighted ex ED and ex 2Y UST futures) also scaled by open interest.

## Chart A20: Momentum signals for S&P500

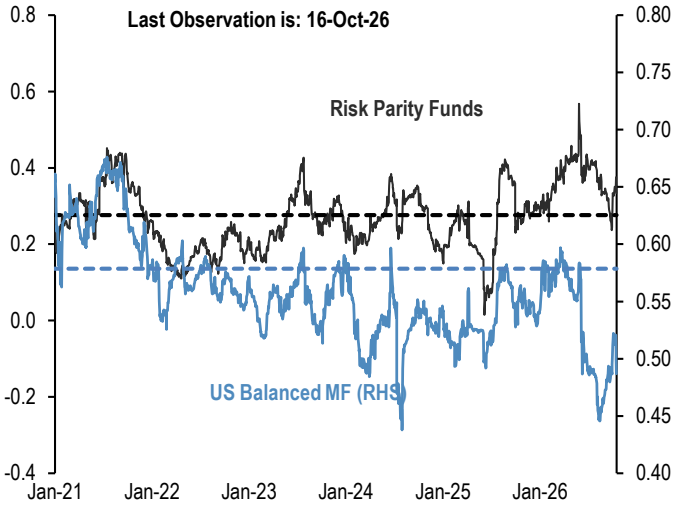

Average z-score of Short- and Long-term momentum signal in our Trend Following Strategy framework shown in Tables A3 and A4 below in the Appendix.

Source: Bloomberg Finance L.P., J.P. Morgan Flows & Liquidity.

## Chart A21: Equity beta of US Balanced Mutual funds and Risk Parity funds

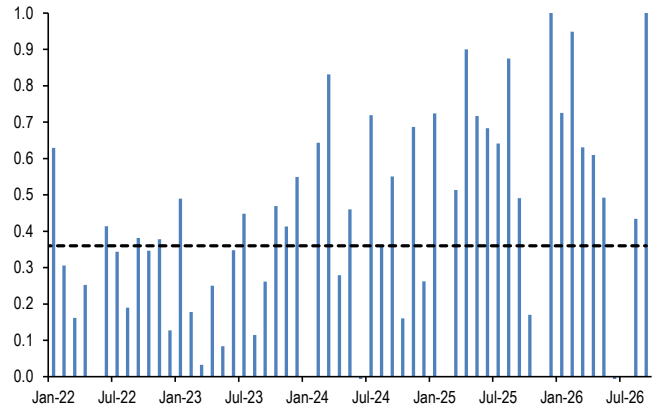

Rolling 42-day equity beta based on a bivariate regression of the daily returns of our Balanced Mutual fund and Risk Parity fund return indices to the daily returns of the S&P 500 and BarCap US Agg indices. Given that these funds invest in both equities and bonds we believe that the bivariate regression will be more suitable for these funds. Our risk parity index consists of 40 daily reporting Risk Parity funds. Our Balanced Mutual fund index includes the top 20 US-based active funds by assets and that have existed since 2006. Our Balanced Mutual fund index has a total AUM of $700bn, which is around half of the total AUM of $1.5tr of US based Balanced funds which we believe to be a good proxy of the overall industry It excludes tracker funds and funds with a low tracking error. Dotted lines are average since 2015.

Source: Bloomberg Finance L.P., J.P. Morgan Flows & Liquidity.

## Chart A22: Equity beta of monthly reporting Equity Long/Short hedge funds

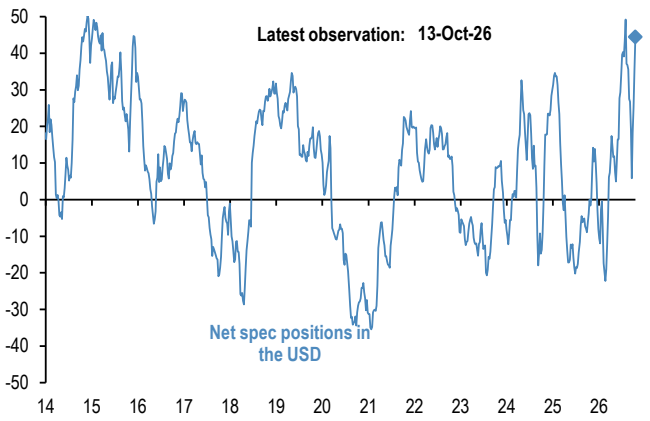

Proxied by the ratio of the monthly performance of Pivotal Path Asset-Weighted Equity Diversified hedge fund index divided by the monthly performance of MSCI AC World Index. Latest obs. is Sept. 26 based on provisional data.

Source: Bloomberg Finance L.P., Pivotal Path, J.P. Morgan Flows & Liquidity.

## Chart A23: USD exposure of currency hedge funds

The net spec position in the USD as reported by the CFTC. Spec is the non-commercial category from the CFTC.

# CTAs – Trend following investors' momentum indicators

## Table A3: Simple return momentum trading rules across various commodities

Optimal look-back period of each momentum strategy combined with a mean reversion indicator that turns signal neutral when momentum z-score more than 1.5 standard deviations above or below mean, and a filter that turns neutral when the z-score is low (below 0.05 and above -0.05) to avoid excessive trading. Look-backs, current signals and z-scores are shown for shorter-term and longer-term momentum separately, along with performance of a combined signal. Annualised return, volatility and information ratio of the signal; current signal; and z-score of the current return over the relevant look-back period; data from 1999 onward.

| | | Lookback (moving avg, days) | Annualized return (%) | Vol (%) | IR | Current signal | Time since last change (days) | Z-score | % Change of return index from its moving average |

**Analyst Certification:** The Research Analyst(s) denoted by an "AC" on the cover of this report certifies (or, where multiple Research Analysts are primarily responsible for this report, the Research Analyst denoted by an "AC" on the cover or within the document individually certifies, with respect to each security or issuer that the Research Analyst covers in this research) that: (1) all of the views expressed in this report accurately reflect the Research Analyst's personal views about any and all of the subject securities or issuers; and (2) no part of any of the Research Analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the Research Analyst(s) in this report. For all Korea-based Research Analysts listed on the front cover, if applicable, they also certify, as per KOFIA requirements, that the Research Analyst's analysis was made in good faith and that the views reflect the Research Analyst's own opinion, without undue influence or intervention.

All authors named within this report are Research Analysts who produce independent research unless otherwise specified. In Europe, Sector Specialists (Sales and Trading) may be shown on this report as contacts but are not authors of the report or part of the Research Department.

## Important Disclosures

An analyst listed on the front cover has personal holdings in digital or crypto assets.

**Company-Specific Disclosures**: J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Important disclosures, including price charts and credit opinion history tables (if applicable), are available for compendium reports and all J.P. Morgan–covered companies, and certain non-covered companies, by visiting https://www.jpmm.com/research/disclosures, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request.

**Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:**
J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, https://.

**J.P. Morgan Equity Research Ratings Distribution, as of October 03, 2026**

| | Overweight (buy) | Neutral (hold) | Underweight (sell) |
|---|---|---|---|
| J.P. Morgan Global Equity Research Coverage* | 53% | 35% | 12% |
| IB clients** | 83% | 81% | 72% |
| JPMS Equity Research Coverage* | 51% | 37% | 12% |
| IB clients** | 95% | 93% | 88% |

***Please note that the percentages may not add to 100% because of rounding.**
****Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.**
**For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.**

**Equity Valuation and Risks:** For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, http://. This report also sets out within it the material underlying assumptions used.

**History of Investment Recommendations:**
A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research &

Commentary page of http:// where you can also search by analyst name, sector or financial instrument.

**Analysts' Compensation:**The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

**Registration of non-US Analysts:** Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

## Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

**UK MIFID FICC research unbundling exemption:** UK clients should refer to UK MIFID Research Unbundling exemption for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Digital assets, which may also be referred to as virtual or crypto assets or crypto currencies (e.g. bitcoin), discussed in this research report are subject to a rapidly changing regulatory landscape. The application of relevant laws in respect of such assets may be unsettled, and the legality of any digital asset investment may be unclear. Prior to making any investment decision regarding any digital asset, investors should seek their own legal advice and be aware of any legal considerations regarding the purchase, holding or selling of such an investment. For relevant regulatory advisories on digital assets, including bitcoin and ethereum, please see https://www.jpmorgan.com/disclosures/cryptoasset-disclosure.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

**Exchange-Traded Funds (ETFs):** J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

**Options and Futures related research:** If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit https://www.theocc.com/components/docs/riskstoc.pdf for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

**Changes to Interbank Offered Rates (IBORs) and other benchmark rates:** Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

**Private Bank Clients:** Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

**Legal entity responsible for the production and distribution of research:** The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be

licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst's name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

**Legal Entities Disclosures and Country-/Region-Specific Disclosures:**

**Taiwan**: J.P. Morgan Securities (Taiwan) Limited is a participant of the Taiwan Stock Exchange (company-type) and regulated by the Taiwan Securities and Futures Bureau. Material relating to equity securities is issued and distributed in Taiwan by J.P. Morgan Securities (Taiwan) Limited, subject to the license scope and the applicable laws and the regulations in Taiwan. **To the extent that J.P. Morgan Securities (Taiwan) Limited produces research materials on securities not listed on the Taiwan Stock Exchange or Taipei Exchange ("Non-Taiwan Listed Securities"), these materials shall not constitute securities recommendations for the purpose of applicable Taiwan regulations, and, for the avoidance of doubt, J.P. Morgan Securities (Taiwan) Limited does not act as broker for Non-Taiwan Listed Securities.** According to Paragraph 2, Article 7-1 of Operational Regulations Governing Securities Firms Recommending Trades in Securities to Customers (as amended or supplemented) and/or other applicable laws or regulations, please note that the recipient of this material is not permitted to engage in any activities in connection with the material that may give rise to conflicts of interests, unless otherwise disclosed in the "Important Disclosures" in this material.

**Thailand**: This material is issued and distributed in Thailand by JPMorgan Securities (Thailand) Ltd., which is a member of the Stock Exchange of Thailand and is regulated by the Ministry of Finance and the Securities and Exchange Commission. The registered address is 548 One City Center Building, 50th Floor, Ploenchit Road, Lumphini, Pathum Wan, Bangkok 10330.

**UK:** Research is produced in the UK by J.P. Morgan Securities plc ("JPMS plc") which is a member of the London Stock Exchange and is authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or J.P. Morgan Markets Limited ("JPMML Ltd") which is authorised and regulated by the Financial Conduct Authority. Unless specified to the contrary, this material is distributed in the UK by JPMS plc and is directed in the UK only to: (a) persons having professional experience in matters relating to investments falling within article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) (Order) 2005 ("the FPO"); (b) persons outlined in article 49 of the FPO (high net worth companies, unincorporated associations or partnerships, the trustees of high value trusts, etc.); or (c) any persons to whom this communication may otherwise lawfully be made; all such persons being referred to as

"UK relevant persons". This material must not be acted on or relied on by persons who are not UK relevant persons. Any investment or investment activity to which this material relates is only available to UK relevant persons and will be engaged in only with UK relevant persons. A description of J.P. Morgan EMEA's policy for prevention and avoidance of conflicts of interest related to the production of Research can be found at the following link: J.P. Morgan EMEA - Research Independence Policy.

**U.S.**: J.P. Morgan Securities LLC ("JPMS") is a member of the NYSE, FINRA, SIPC, and the NFA. JPMorgan Chase Bank, N.A. is a member of the FDIC. Material published by non-U.S. affiliates is distributed in the U.S. by JPMS who accepts responsibility for its content.

**General:** Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.
