Industry View **In-Line**

Key Takeaways

- We view negative PC comments as more bearish for OEMs and ODMs positioned in the lower end consumer segment, like Acer and Compal.
- Strong CPU unit growth would be positive for Wiwynn, Lenovo, and Lotes.
- Tighter ABF substrate supply and stronger pricing would be positive for Unimicron and NYPCB's revenue and margins.

(-) PC OEMs and ODMs: Intel (covered by Joseph Moore) expects 2H26 PC units to fall 20%+ y/y as OEMs aggressively cut inventories amid weaker sell-through; the correction has accelerated over the past two months. This aligns with Morgan Stanley's estimate at a ~25% y/y decline (report link).

(+) Server OEMs and ODMs: Intel guides for server CPU unit growth of 30%+ in both 2026 and 2027, with upside if wafer/substrate supply improves. It sees server CPU TAM rising from US$40bn today to >US$200bn in five years, driven mainly by AI agents.

(+) ABF substrates: Most of the previously discussed ~40% capacity increase is due in 2H27; Intel expects key component purchase commitments to rise sharply over the next several quarters. Intel is also prioritizing securing substrate capacity and improving yields for the EMIB-T. Complex designs add yield risk, which could lower effective output, worsening ABF substrate shortages but adding further support for pricing.

Exhibit 1: Worldwide PC Vendor Ranking, 3Q26

Worldwide PC Vendor Ranking, 3Q26

Rank	Vendor	3Q26 Shipments	3Q26 Market share	2Q26 Shipments	2Q26 Market share	3Q25 Shipments	3Q25 Market share	QoQ	YoY
1	Lenovo	14,933	23.8%	16,659	24.2%	19,305	24.6%	-10%	-23%
